

EPIM Cabot Moderately Cautious

Investment objective and policy

These discretionary managed model portfolios offer risk-profiled investment solutions, all of which have a dynamic top-down asset allocation strategy implemented using low cost index tracking funds.

The investment objective for the EPIM Cabot Moderately Cautious Model Portfolio is to provide a long-term total return which is superior to inflation plus 1% returns. The performance of the model portfolio is not intended to track the rise (or fall) of any specific index.

Key facts

Inception Date	30/09/2012
Typical Growth / Defensive Split	30:70
Annual Management Charge	0.20%
Total Ongoing Charges (of underlying funds)	0.14%
Portfolio Total Ongoing Charge	0.34%

Equity markets were volatile in July as investors became worried about a potential US recession and stretched valuations in the technology sector.

Many US companies said they were cutting back on spending in their second-quarter earnings reports, fuelling concerns about the health of the US economy. Accusations that the Federal Reserve (Fed) had kept borrowing costs too high for too long increased after the central bank held interest rates. Indeed, since the end of the month, a jobs report showed a sharper slowdown in US hiring than Wall Street expected. The European Central Bank cut rates in June and the Bank of England followed suit in July. Globally, yields on long-dated bonds rose.

Worries about valuations in the technology sector accelerated. Earnings reports from Alphabet and Tesla disappointed and sparked a wider sector sell off. Concerns centred about the level of spending on AI-related infrastructure, with doubts mounting about whether future returns could justify current investment.

Japanese equities struggled and there was a major sell-off after the Japanese central bank raised the cost of borrowing at month-end. The Bank of Japan raised interest rates for only the second time in 17 years as it continued its shift away from negative interest-rate policies. The strengthening yen has prompted an unwinding of the carry trade – and raised concerns about prospects for the country’s key exporters. Chinese equities remained out of favour as its economy recovers slowly from the Covid-19 pandemic. There are still problems in its property sector and stimulus measures have been muted, but interest rates were cut.

Previous expectations that the Fed can engineer a soft landing are being tested and the FOMC’s next scheduled meeting isn’t until mid-September. July’s events mean there is likely to be continuing volatility until the markets get clarity on future policy. Although the Fed held rates in July, Chair Jerome Powell hinted a rate cut in September was likely. The soft payrolls report has now raised market expectations that a 50-basis-point cut could be in prospect.

Important Information

Certain information ©2023 MSCI ESG Research LLC. Reproduced by permission

The value of investments, and the income derived from them, can fall as well as rise. Investors may get back less than invested. Returns may be affected by currency exchange rate fluctuations.

Performance is calculated on a Total Return basis using a notional portfolio in Financial Express Analytics. Performance is net of Eden Park Investment Management fees but not adviser fees nor platform costs. Any charges and fees applied by authorised intermediaries will be charged in addition to the charges shown. The Total Ongoing Charges Figure (TOC) is calculated by Financial Express Analytics using a weighted average of the underlying investments and represents underlying Ongoing Charges Figure plus Transaction costs plus Incidental costs for those holdings. Portfolios linked to this Model Portfolio may not exactly replicate the model due to the difference in timing of initial investment or rebalancing differences resulting from individual portfolio circumstances. The management and rebalancing of this Model Portfolio does not take Capital Gains Tax into consideration.
